TITLE: Video communication system having automatic video message replying function using computer communication network and method thereof

INVENTOR: PARK, Y S

PATENT-ASSIGNEE: I-TEAMS CO LTD (ITEAN)

PRIORITY-DATA: 2000KR-0032781 (June 14, 2000)

PATENT-FAMILY:

PUB-NO	PUB-DATE	LANGUAGE	PAGES	MAIN-IPC
KR 2001111981 A	December 20, 2001		001	H04N007/14

APPLICATION-DATA:

INT-CL (IPC): H04 N 7/14

ABSTRACTED-PUB-NO: KR2001111981A
BASIC-ABSTRACT:

NOVELTY - A video communication system having automatic video message replying function is provided to obtain the most convenient communication environment for users by automatically transmitting absence messages or replying messages when plural users want to have video communication through a computer communication network.

DETAILED DESCRIPTION - The web server decides if a first user requests video communication setting with a second user. If so, the web server searches(S510) a second user. The web server checks(S520) if the second user decided as a video communication partner with the first user is logged on the current video communication service site or not. If the second user is available for video communication, the web server performs(S530) video communication between the first and second users by setting the video communication therebetween. If the second user cannot have video communication, the web server searches(S540,S550) if an absence message of the second user is saved in a message DB. If so, the web server transmits(S560) the absence message to the first user. If an absence message of the second user does not exist, the web server transmits(S560) a common absence message. The first user receiving the absence message from the second user leaves a replying message to the second user. If a replying message is received(S570) from the first user, the web server saves(S580) the replying message as message data of the second user in the message DB.

ABSTRACTED-PUB-NO: KR2001087572A
BASIC-ABSTRACT:

NOVELTY - A method for buying and providing a commodity is provided to prevent presents from being duplicated.

DETAILED DESCRIPTION - A plurality of second users(214) wants to present a gift to the first user. A database(238) stores a gift list wanted by the first user, event contents, the second users list designated by the first user. A server(234) connects to the first user, the second users(214), and the database(238) through a communication network. An operator searches the database(238) using the server(234) and extracts gift buyer information registered by the first user(gift registrant). The extracted gift buyer information is classified. The operator transmits event contents information designated by the first user to the second users.
